

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

From research finding concluded four indicators about students vocabulary mastery. They were meaning, spelling, grammatical function and part of speech. Beside on the persented table can concluded that students mastery vocabulary on the eight grade SMP Negeri 1 Mempawah Hulu still low. Because students score under the target score. So teacher should innovative media and method to convey english subject to the students who have unability to mastery vocabulary.

One aspect of english that plays a very important role was vocabulary. It was one of the important components in english teaching process. In learning english, students should be able to understand words being used because by understanding the vocabulary of the target language, it would be found that the student learn english as a foreign language still faced a lot of difficulties in mastering the language still lack of vocabulary. The students mastery by them. A good score of vocabulary was essential to succeded in english learning, without no one can understand the target language. It means that vocabulary was the key of the four language skills.

B. Suggestion

In this study, researcher would like to give some suggestions related to students vocabulary mastery:

1. For the students

From this study researcher expected students have the magic strategy to mastery vocabulary, so that they have awareness to learn word meanings, spelling, grammatical function and part of speech with strategies what ever it.

2. For the teacher

A teacher could built the automatic dictionary in students' memory. It would be fine if a teacher more creative to search the interesting method to develop students vocabulary. Knowing the importance of vocabulary, english teacher must be aware of the significance in applying an appropriate teaching technique.

3. For the next research

The research hoped that other researcher could used this project as one of their references in conducting their research on the same field of study. But not least, the researcher hope there would be a better improvement for the next study then.
