

## **CHAPTER V**

### **CONCLUSION AND SUGGESTION**

#### **A. Conclusion**

Based on tracing the data in this research, it is believed that using Canva as a learning media can improve students' writing skills. To support this result, there are two types of data presented in this research, namely, quantitative data and qualitative data.

From the findings of the researcher in this research, it can be concluded that Canva can improve students' writing skills and motivation. The students had positive progress in writing the indicators as mentioned in the research findings. They understand how to write an explanation text. The results showed that students had also improved their writing skills in almost five elements of writing (content, organization, grammar, vocabulary, and mechanics). They become better at composing explanation texts effectively and efficiently.

On the other hand, using Canva can improve students' writing skills and become the right strategy for dealing with student writing problems that occur in class. Thus, the prediction of the action hypothesis is accepted.

#### **B. Suggestion**

Canva is a learning media that can be applied in the teaching and learning process of English not only for writing skills but can also be used for other skills such as reading, speaking and listening.

Teacher can apply this Canva media as a variation in the teaching and learning process to overcome student boredom in class. This Canva media is recommended for English teachers because it can attract students' interest and can be a motivation in the teaching and learning process.

For students, they must remain enthusiastic in learning English, especially learning to write because writing is important to communicate and correspond with other people. In addition, students do not need to be

afraid to compose and select several words or sentences. Students must respond to the teacher during learning activities and ask the teacher to better understand the material the teacher is teaching.

In closing, the researcher realizes that this thesis is still far from being perfect. So, criticism and constructive suggestions are highly expected by researcher. Hopefully this thesis is useful and works for all of us.
